

# ASSIGNMENT-4

Q. Can we submit the input fields that are submitted outside the form tag?

- No, we cannot submit input fields located outside the <form> tag using the standard HTML form submission.
- Form fields outside the <form> tag is not part of the form and will not be included when the form is submitted.
- If we need to include those input fields in your submission, we'll typically need to use JavaScript to gather the data and send it to the server separately.
