

# ASSIGNMENT-2

## 2. What is JavaScript engine for Safari?

- The JavaScript engine for Safari is JavaScript Core. It's also called Nitro and Squirrelfish Extreme. The name of the project and library is always JavaScript Core.
- Web Kit is a browser engine developed by Apple and primarily used in its Safari web browser, as well as all web browsers on iOS and iPadOS.
- One major difference is that Safari is developed and maintained by Apple, while Chrome is developed and maintained by Google. As a result, Safari is the default browser on Apple devices such as iPhones and Macs, while Chrome is more widely used on Windows and Android devices.
- the user interface and design. Safari has a more minimalistic design approach, with a focus on simplicity and ease of use. Chrome, on the other hand, has a more customizable interface with many options for extensions and themes.
