ASSIGNMENT-1

Q. HOW TO ADD MORE THAN CSS CLASS TO HTML TAGS?

Assign classes to an element:

➢ Users write the names of the classes inside the class attribute. But note that users must add the names with the **space-separated** method.

Syntax:

➢ <tag_name class = "class_1 class_2" >
➢ Secondly, users can style the two classes separately using the following syntax, or they can style the whole element containing both classes.

The syntax of styling both classes individually:

➢ <style>
➢   .first_class{
➢   /* here, we add the styles */
➢   }
➢
➢   .second_class{
➢   /* here, we add the styles */
➢   }
➢ </style>

Explanation of the syntax:

➢ Using the HTML `<style>` tag, we have added two classes and styles and defined these using CSS.
